

Old Industry

HDRP :

Start a new Unity project using HDRP – or – Start a new Built-in Project, and download HDRP via the Package Manager.

Import the OldIndustry asset, and open any scene from **OldIndustry > Scenes**

Optionally, Lightmaps may need to be rebuilt,
go to Windows > Rendering > Lighting and click Bake at the bottom.

URP :

Start a new Unity project using HDRP – or – Start a new Built-in Project, and download HDRP via the Package Manager.

open the package located in **OldIndustry > Settings > URP**.

Assign the extracted **URPAsset** in **Edit > Project Settings > Graphics**.

Assign the provided Global Volume Profile located in **OldIndustry > Settings > URP** to the Global Volume in the scenes if missing.

Shaders :

Static lamps can be toggled on/off on the prefab level (OldIndustry > Prefabs > Furniture > Lamps). You will also need to enable emission on their materials.

Props lamps are disabled by default for performance.
Enable the PropsLamps gameobject in the Hierarchy to toggle them on

Notes :

Some models may throw warnings at the console for a Collider Hull not generating correctly,
Some models may throw warnings of Lightmap overlapping UV's, These are only warnings, and can be dismissed.
